CAMPAIGN PRE-FLIGHT

rubric v1 · server 0.1.0

Score any offer 0–100 in under a minute — the rubric marketing-scope-mcp runs mechanically.

The loop: plan_campaign → score_offer → build_plan → check_plan

Gate rule: build_plan rejects any offer never scored. check_plan fails any tactic missing a scored-offer citation [On] or a success metric.

DIMENSION	WEIGHT	SCORES POINTS WHEN...
offer clarity	/ 20	Has a price (or an explicit free). Names the concrete deliverable. No vague words.
audience specificity	/ 24	Named segment you could picture. Speaks second person. ≥1 specific stat or bracket.
differentiation	/ 20	Says what it is instead of (only/first/unlike). Names the mechanism why it works.
proof & risk reversal	/ 20	Guarantee, testimonial, or countable proof. Track record or publication credit.
call to action	/ 16	Actionable verb (start/join/get). Urgency or deadline if it's real.

Grades: A ≥ 80 B ≥ 65 C ≥ 45 D < 45

Kill rules: every scored offer below 45/100 → STOP, rework the offer before spending anything on traffic. One week of no traction with an A/B offer live → re-plan instead of raising spend. CPA above 1/3 of first-order profit for 7+ days → kill the channel.

The flags are the to-do list:

no-price	no price token found — the offer literally doesn't state the cost
no-proof	no guarantee, testimonial, or countable evidence
unclear-audience	no named segment; the offer could be for anyone (so it's for no one)
no-cta	no actionable verb — the reader isn't told what to do
no-concrete-deliverable	no deliverable word (guide/kit/ledger/session…); is anything actually for sale?

The plan gate (one tactic per line):

[O1] Send 3-email welcome sequence to list introducing [O1]; metric: 35% open / 3% CTR ← PASSES (cites a scored offer AND names a metric)

Blast retargeting at everyone on the internet ← FAILS: no [On] citation, no metric (check_plan returns the orphan list — never a silent pass)

Free one-pager from marketing-scope-mcp — plan/score/build/check pipeline that refuses unscored offers and metric-less tactics before a dollar moves. github.com/AxelVerneBooks/marketing-scope-mcp · registry: io.github.AxelVerneBooks/marketing-scope-mcp (v0.1.0, active).
